UNIVERSITY

Ken Stedman

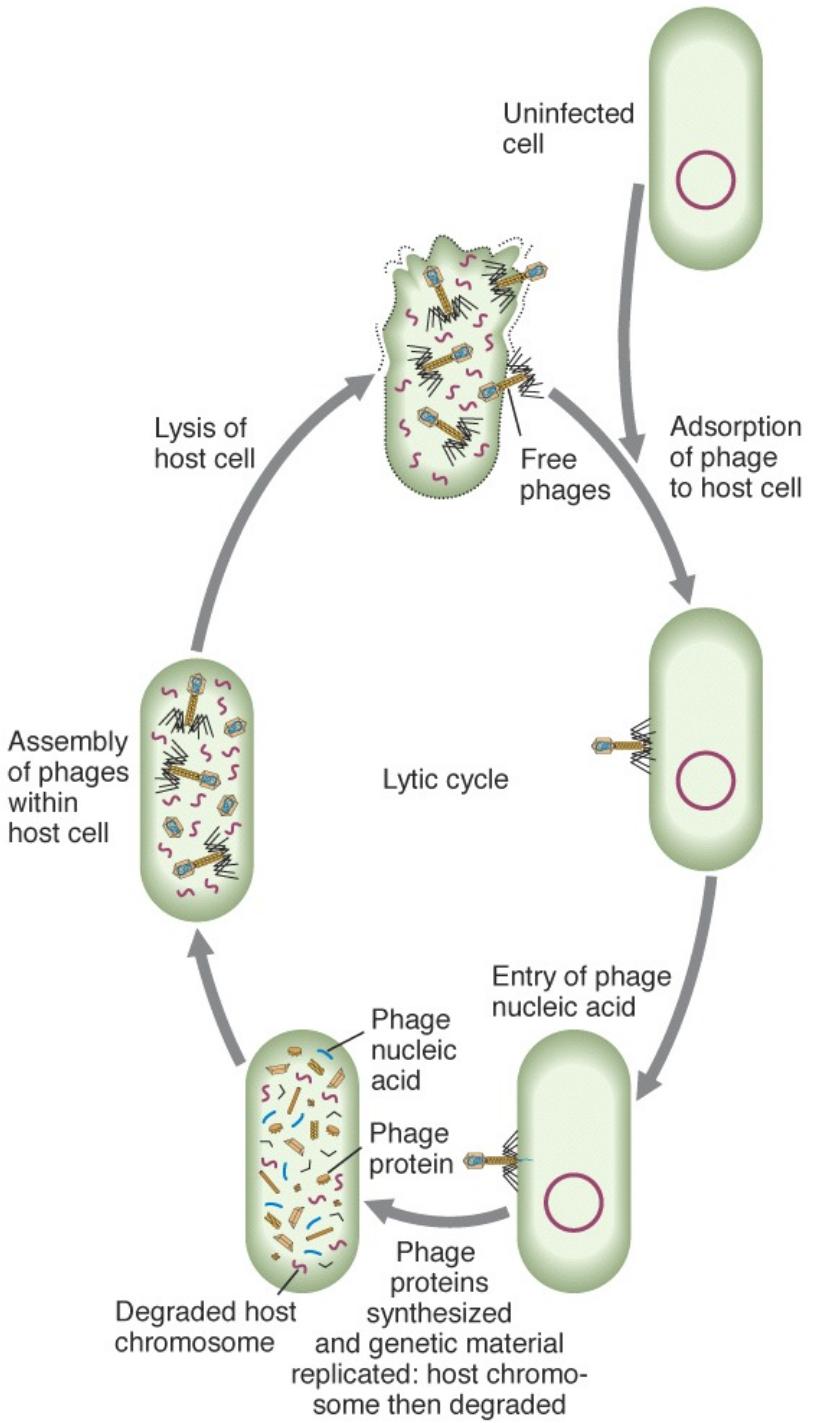

What is a “virus”? 1

- “Simply a piece of bad news wrapped up in a protein”. – Peter Medawar
- A **“very small”** infectious obligate intracellular parasite
- A bag of nucleic acid

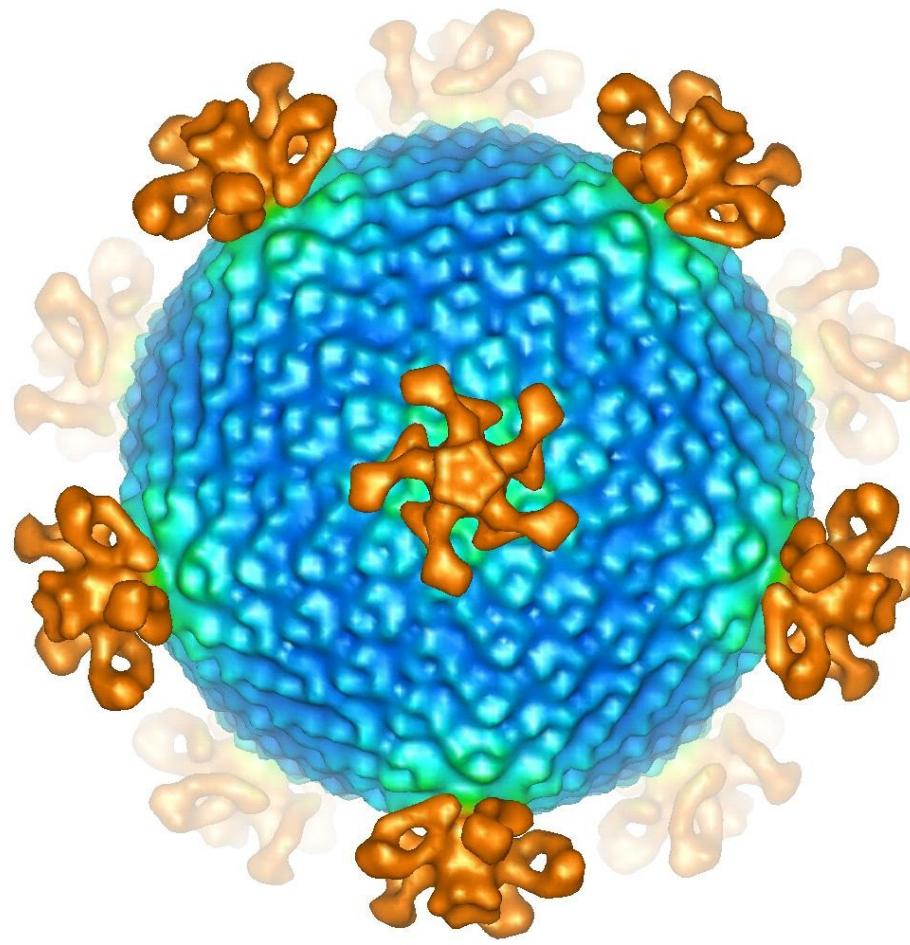

What is a virus? 2

- “Viruses are entities whose genomes are elements of nucleic acid that replicate inside living cells using the cellular synthetic machinery and causing the synthesis of specialized elements that can transfer the viral genome to other cells” – Luria, 1978

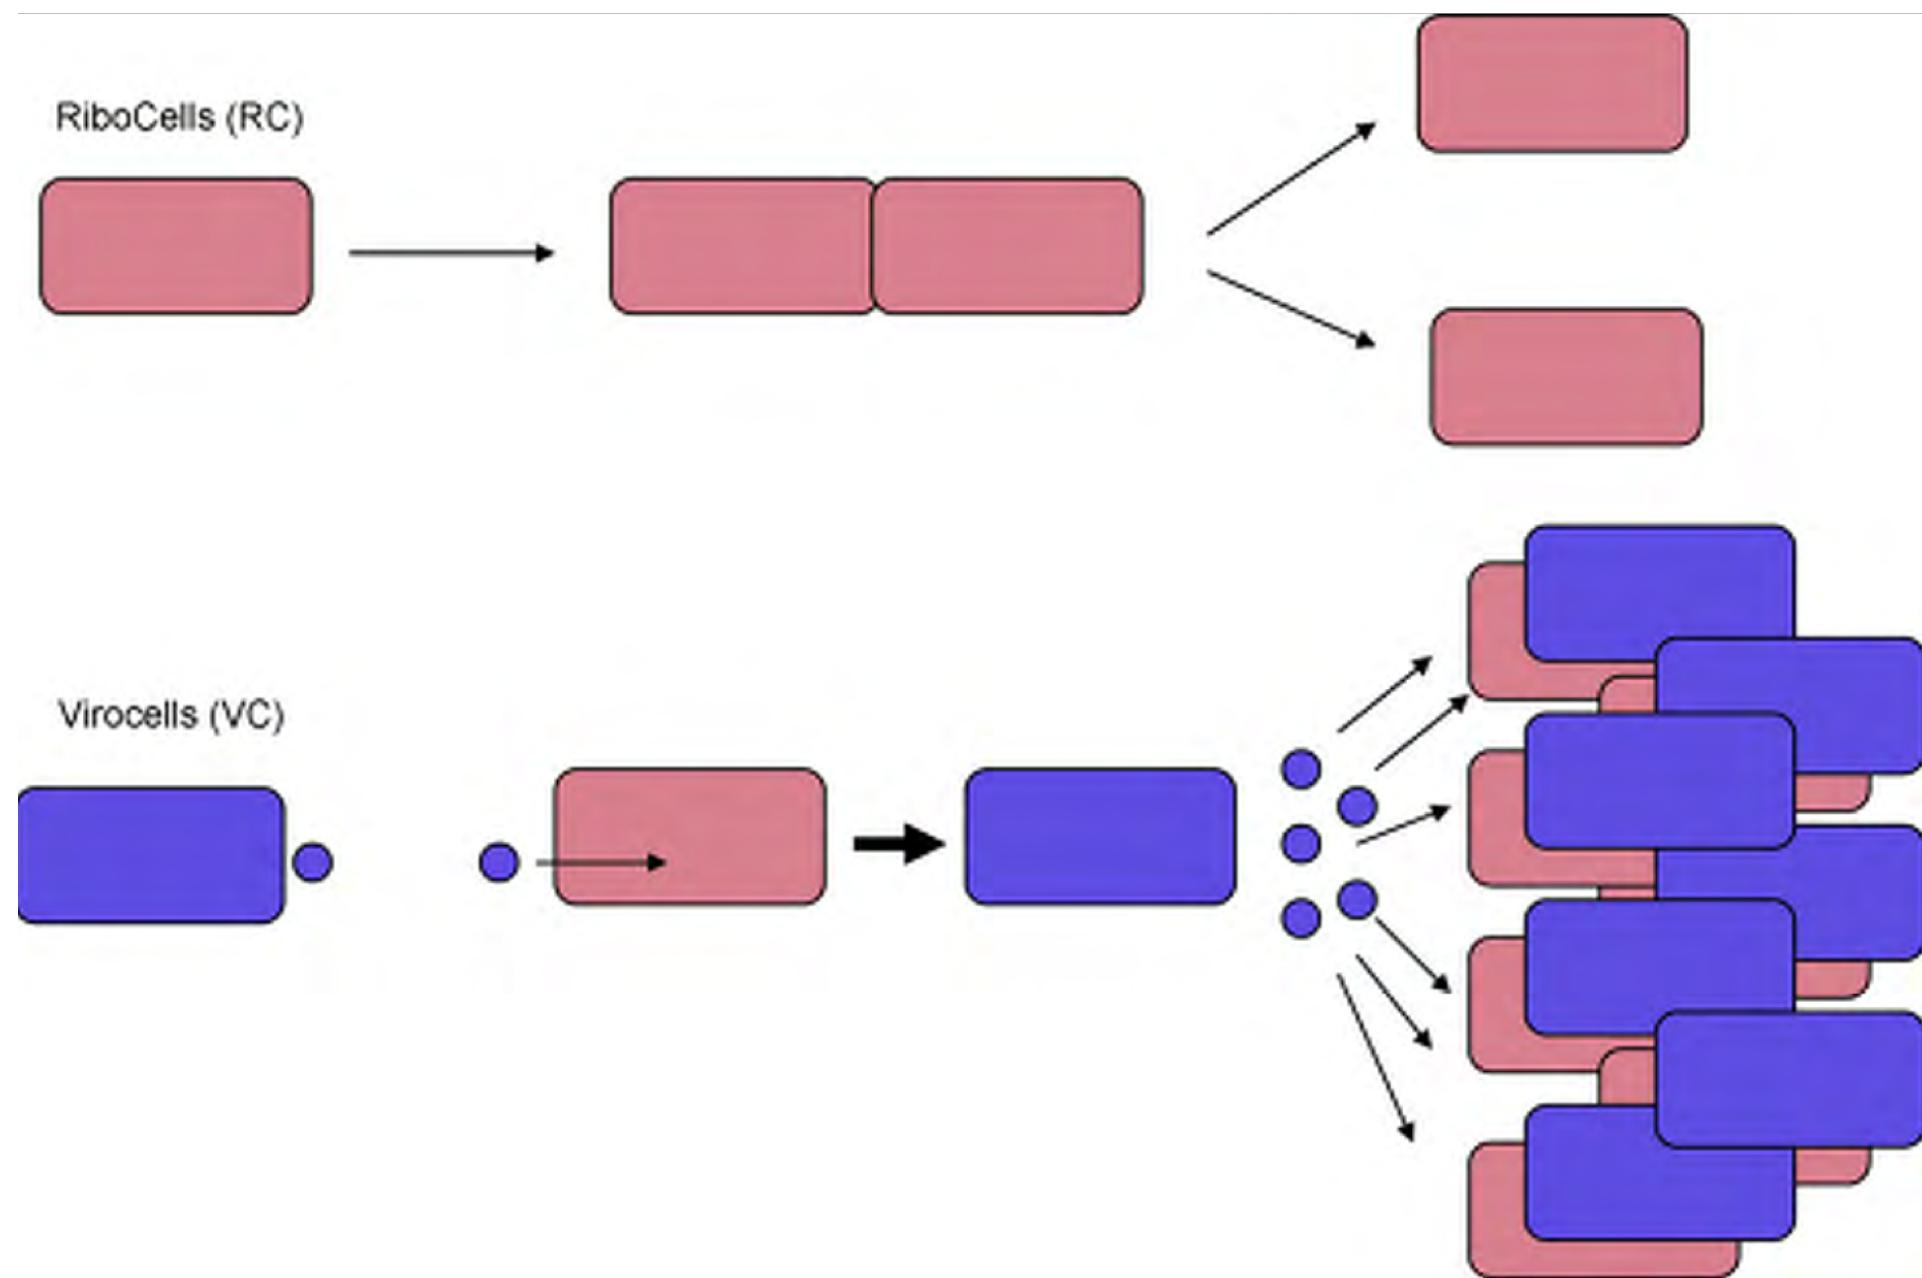

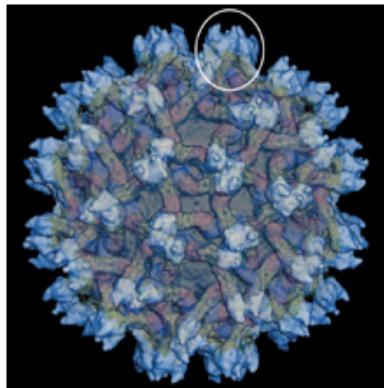

Ceci n'est pas une pipe.

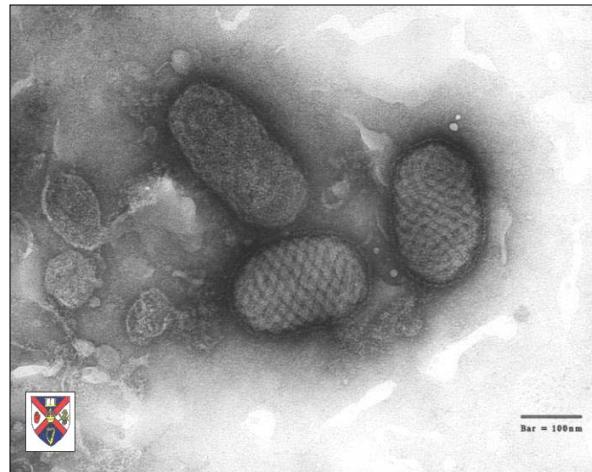

Ceci n'est pas un virus

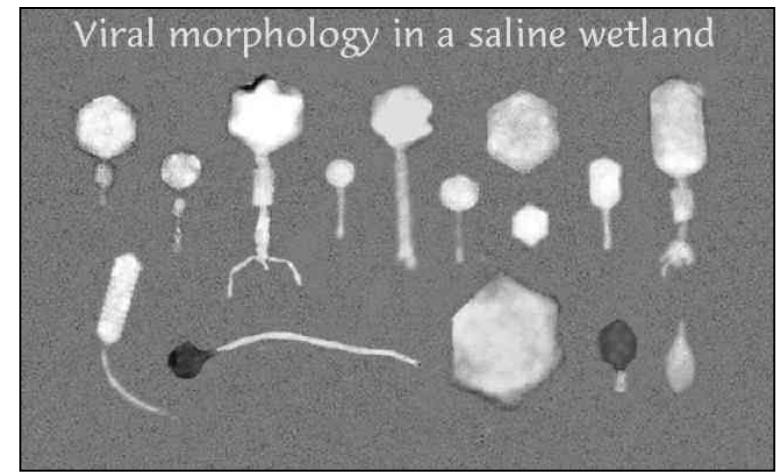

Virions have distinctive morphology

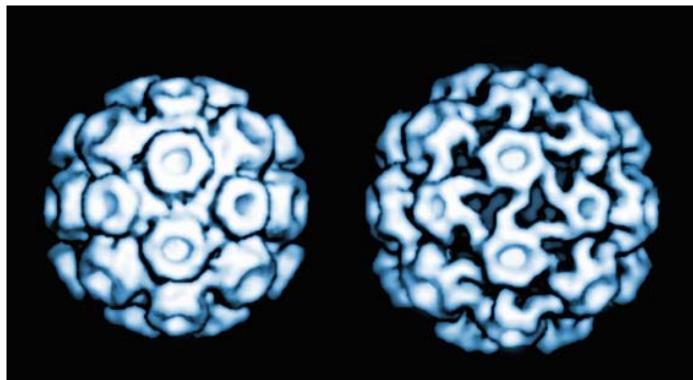

Dengue Virus

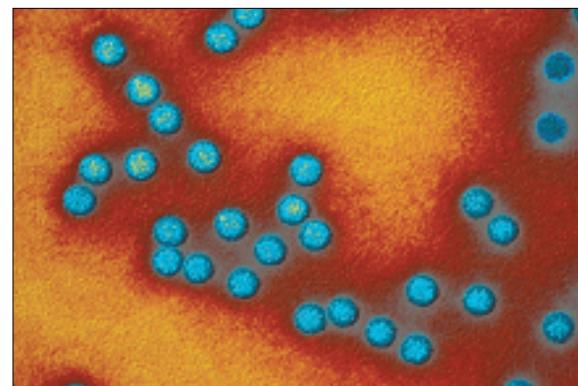

Myxoma Virus

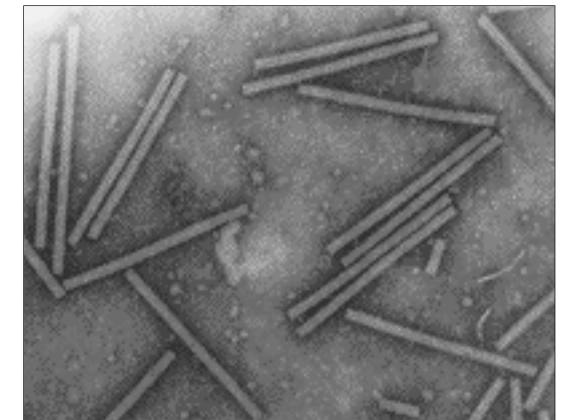

Virus Like Particles in Environment

Cowpea Chlorotic Mottle Virus

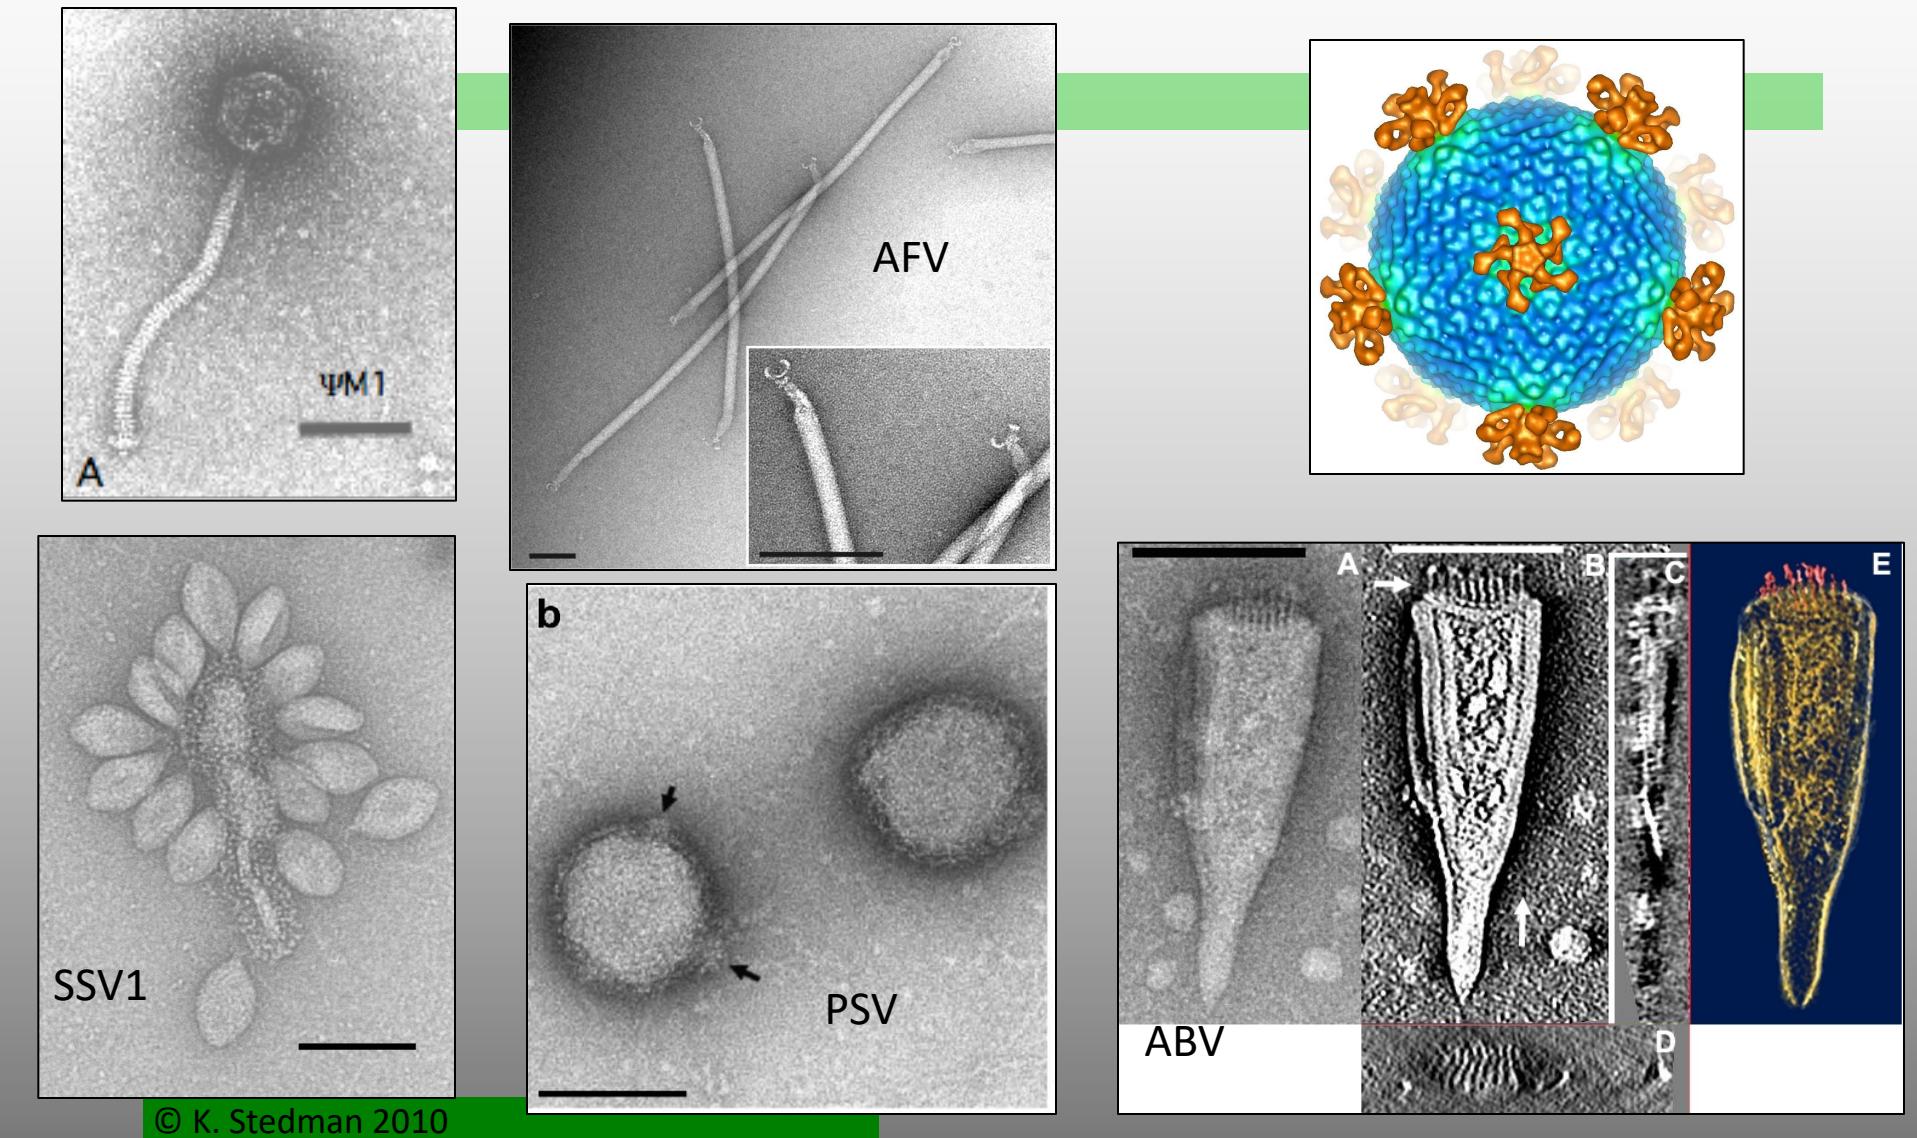

Polio Virus

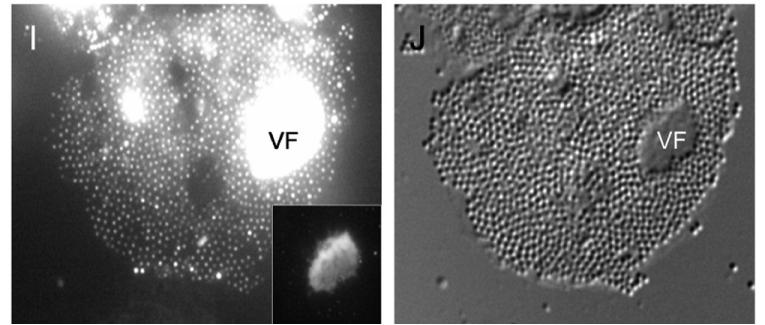

Tobacco Mosaic Virus

Archaeal virions are highly diverse!

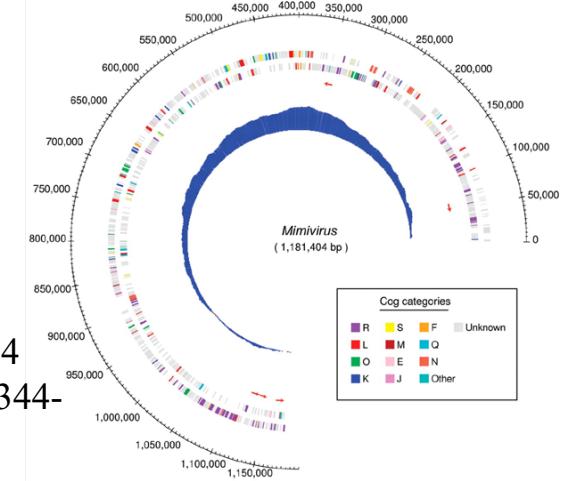

“Giruses”

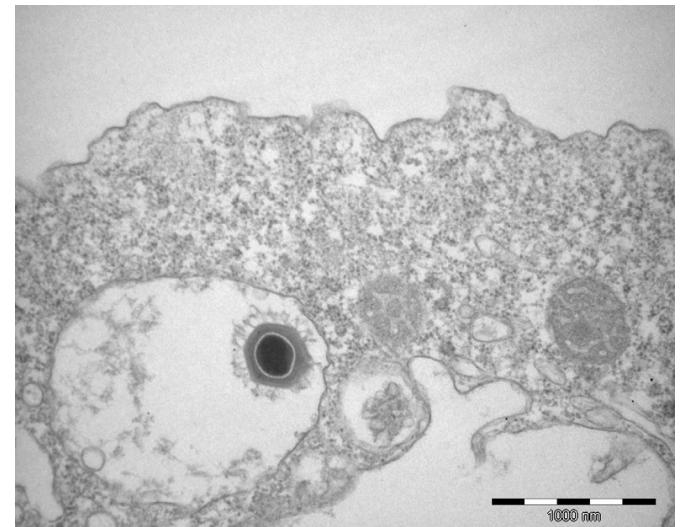

- Virions as big as (or bigger than) cells
- Amoebal virus
 - Mimivirus
 - Sputnik
- LARGE genome

Suzan-Monti M, et al. (2007) *PLoS ONE* 2(3): e328.

Raoult et al.,
Science. 2004
306(5700):1344-
50.

How ancient are viruses?

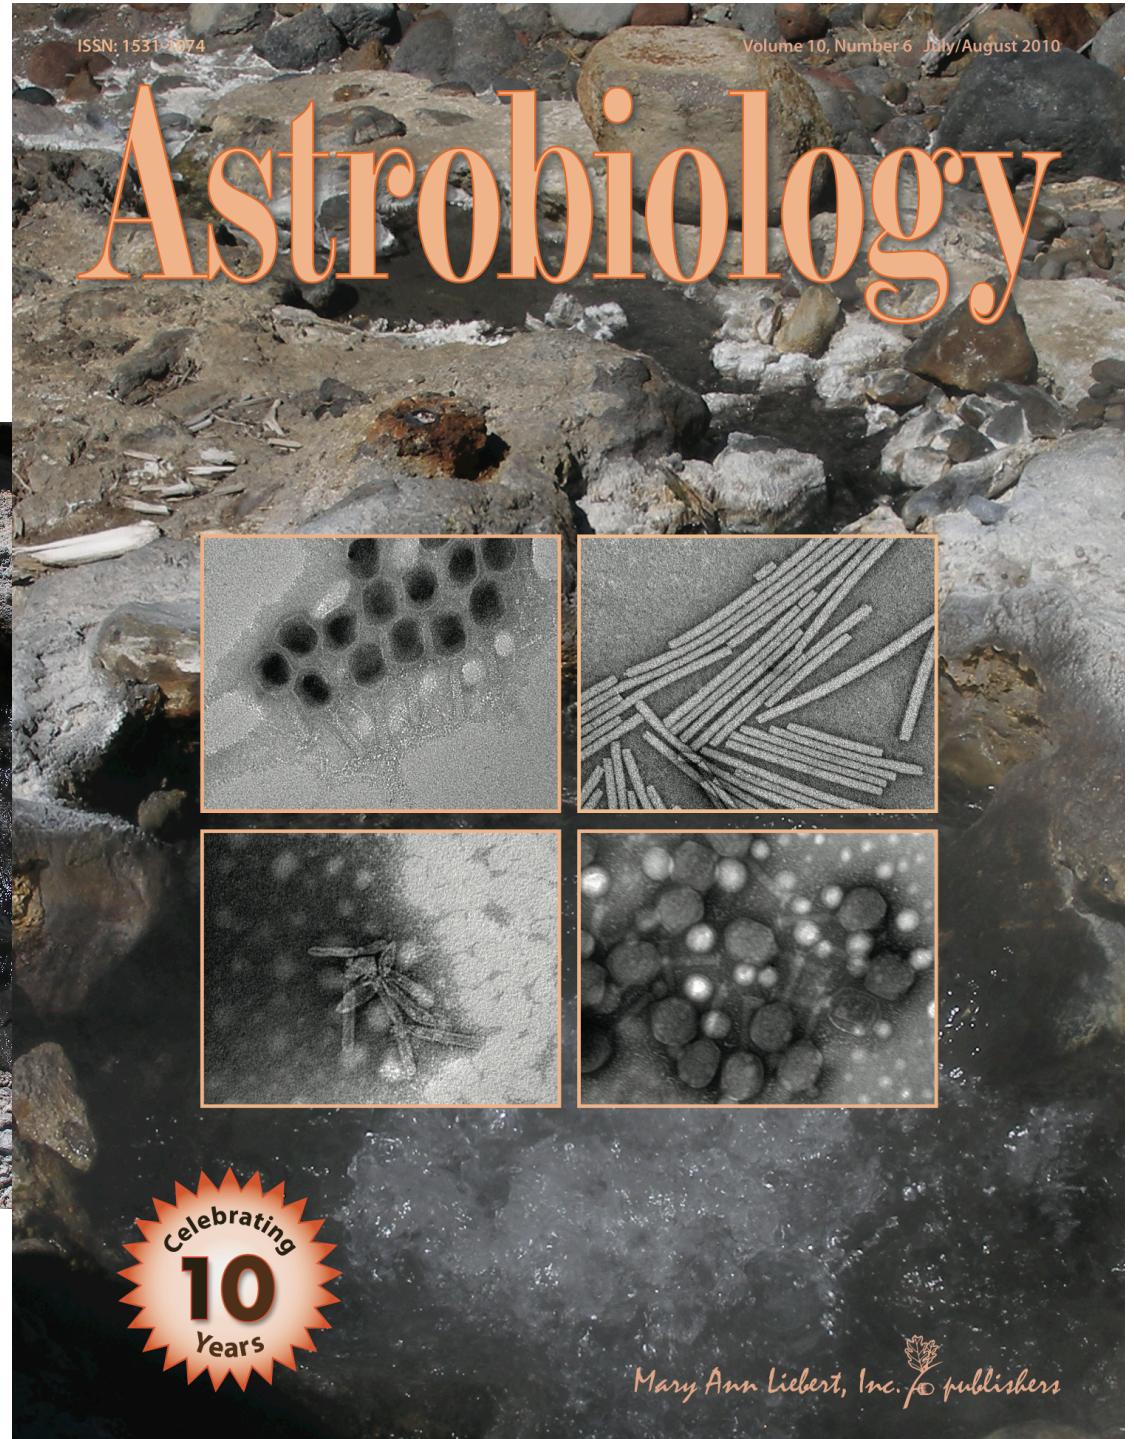

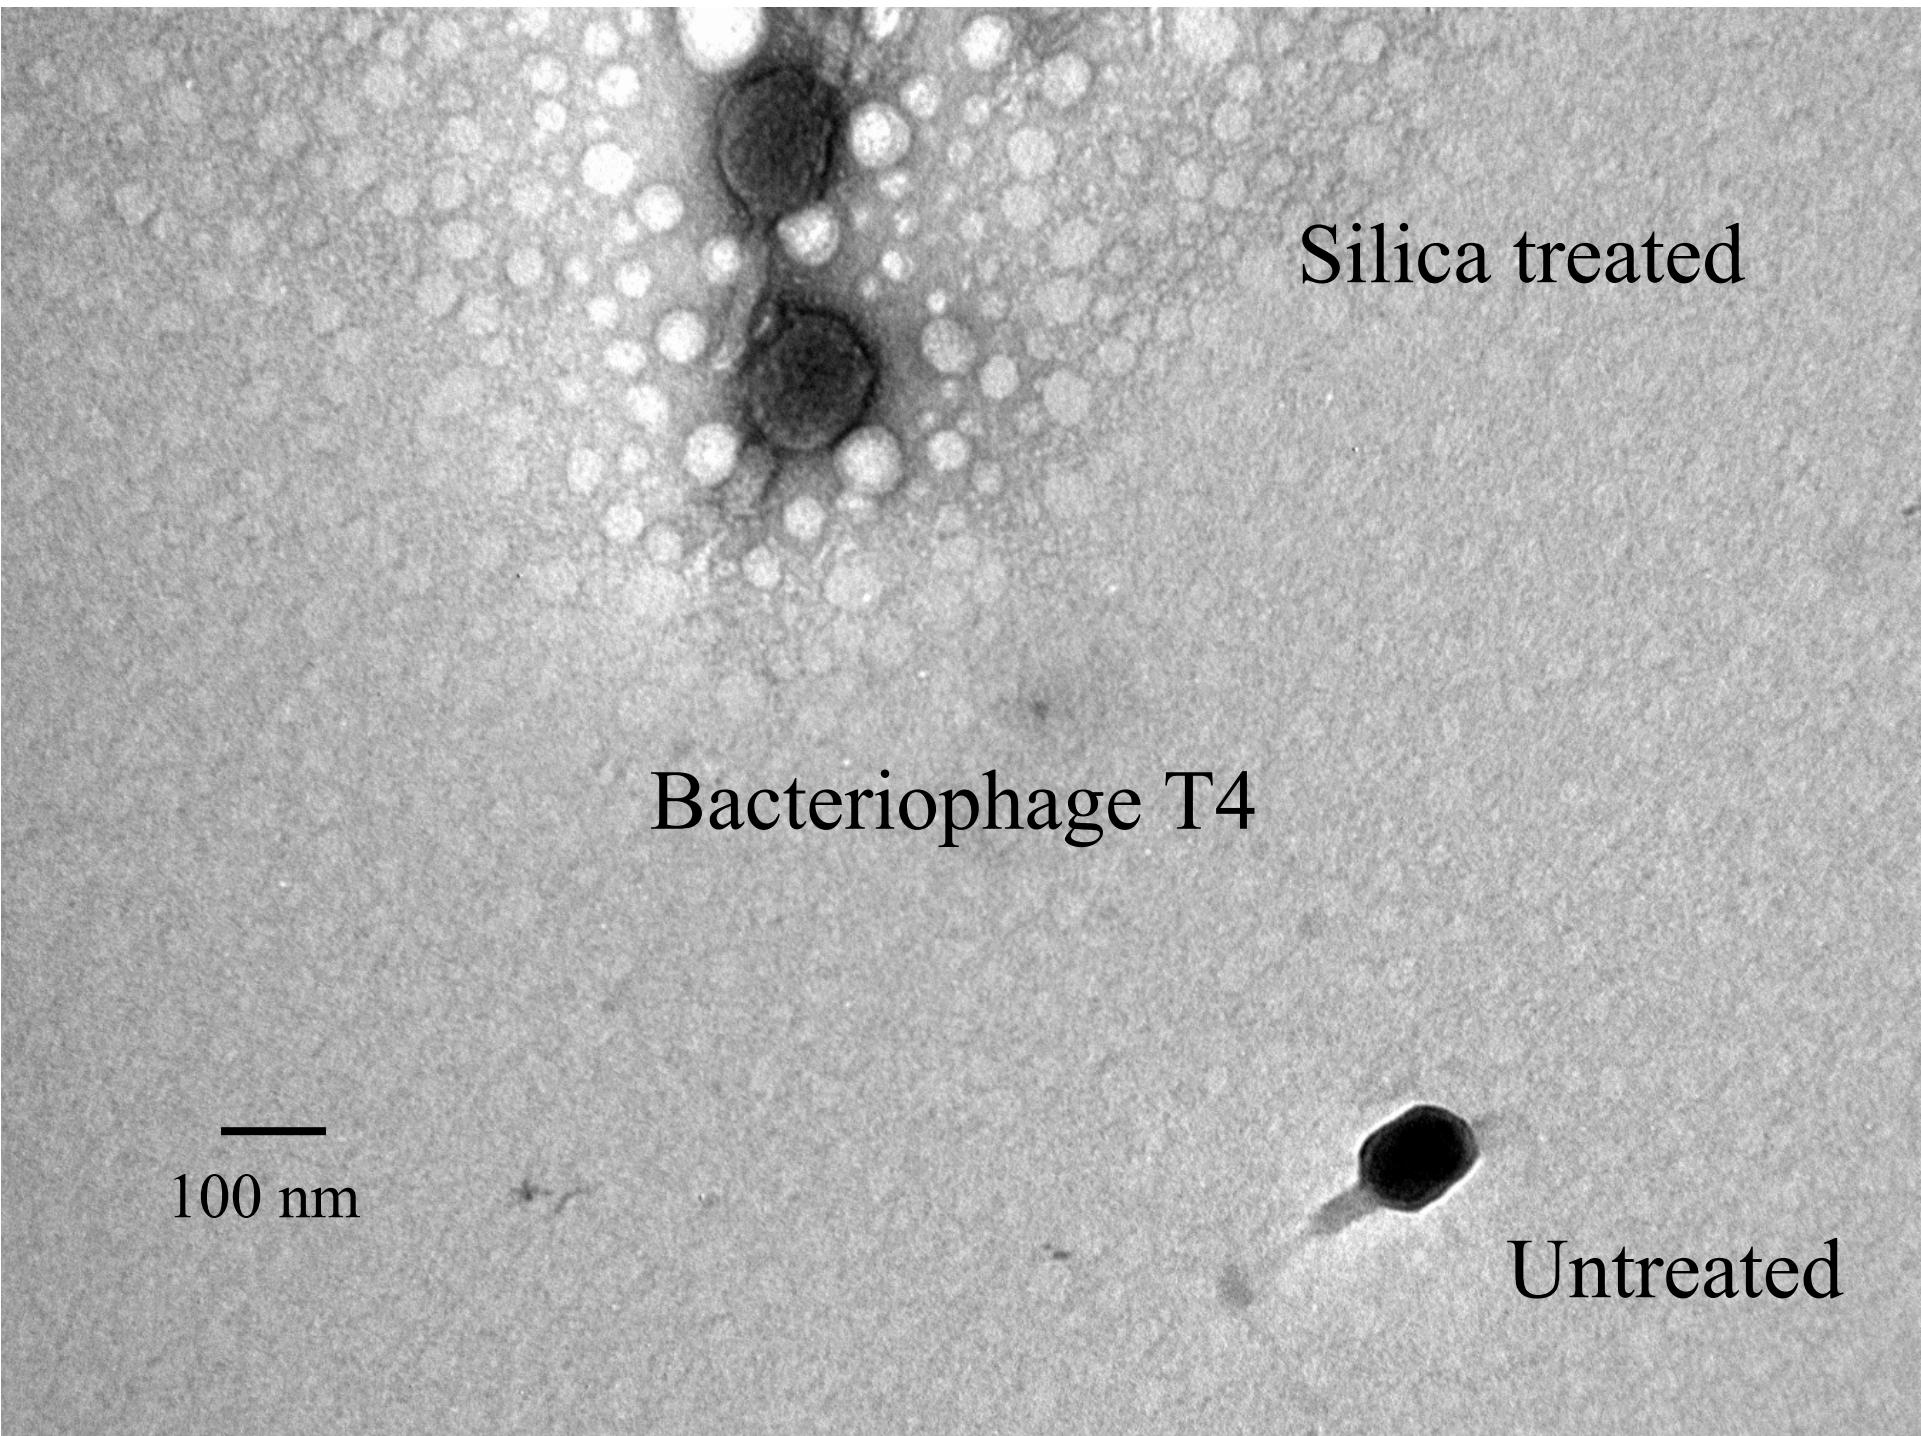

Jim Laidler, M.D., Ph.D.

Silicification in hot spring water

Laidler and Stedman, 2010

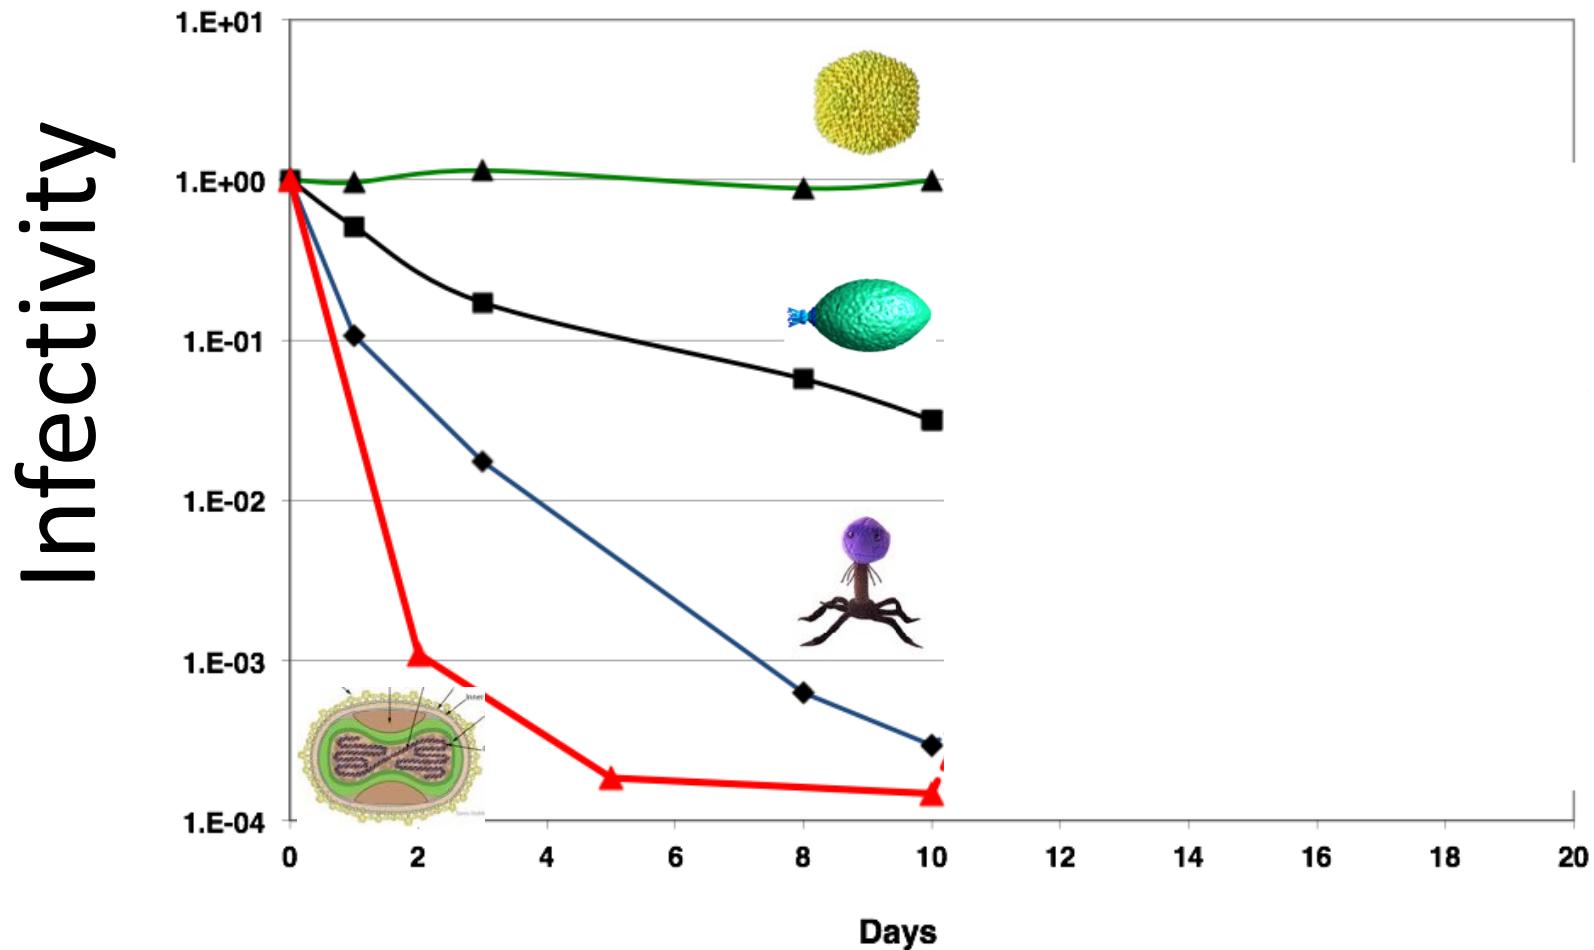

Silica treated

Bacteriophage T4

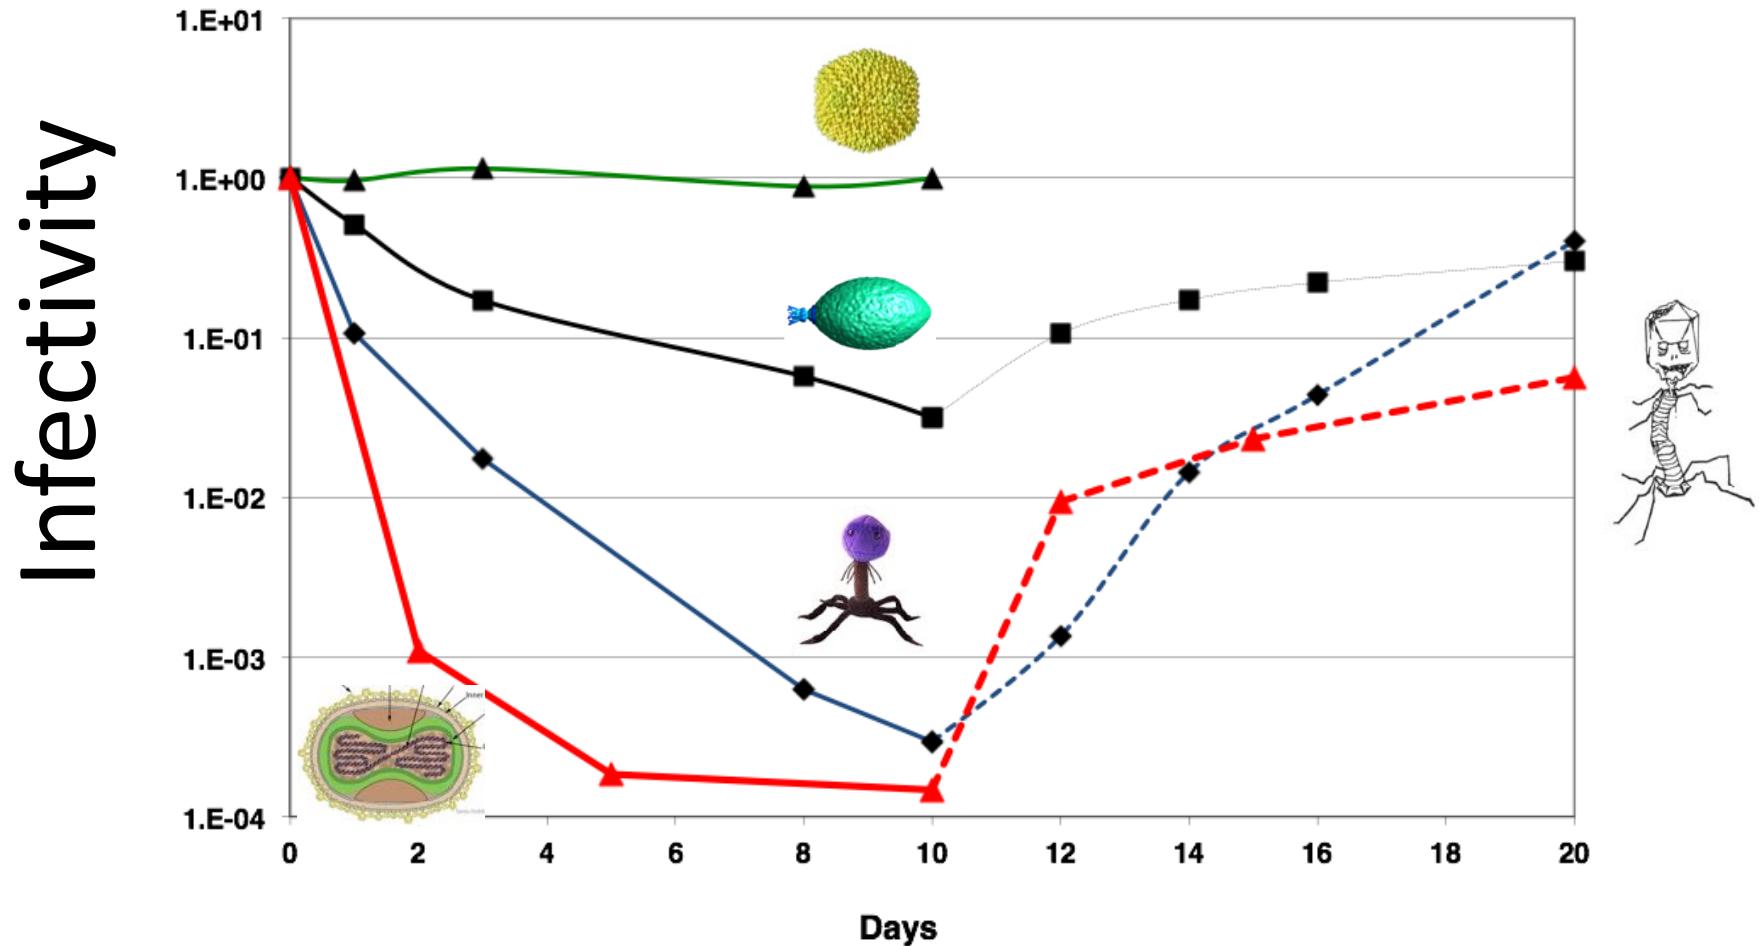

100 nm

Untreated

Silicified viruses lose infectivity.

Desilicified viruses are active.

Astrovirology Strategy?

- Validation of virus biosignatures
- Virus detection experiments for missions to Europa and/or Enceladus
- Inclusion of viruses in models for ancient oceans and extra terrestrial systems
- Isotope fractionation by AMGs?
- Exposure studies
- Unknown, abundant cosmopolitan viruses
- Roles of viruses in the origin and evolution of early life
- Outreach

Berliner et al.,
Astrobiology, 2018
